Through a series of processes of evaporation, transpiration, condensation, precipitation, infiltration, runoff and other smaller processes, the water cycle keeps the Earth's water clean, distributes water through the surface of the planet, maintains aquatic ecosystems and helps in the process of plant growth. The water cycle maintains the life of the Earth. The water cycle can also be called the hydrological cycle. Water cleaning During the process of evaporation, the heat of the sun forces the water to evaporate into the atmosphere's sphere. First, all the plants on the surface absorb it. You can find more information or change your preferences here Water Cycle: Precipitation Water cycle: Precipitation Start from the precipitation the cloud water cycle and match parts of the cycle with this clear and colorful image of a simple water cycle, using the useful paragraph. Download the CBSE class 2 worksheet of the water cycle based on the latest curriculum including filling in the blanks, long questions, questions based on the water cycle, freezing, fusion and more. As it becomes gas or water vapor and moves through the air, impurities and even salt from the oceans are left behind through distillation but that is not the only way the water cycle purifies water. No matter what its current form or where it is, there is always about the same amount of water available on the planet. About 75 percent of the Earth is covered in water in some form, whether it's saltwater in the ocean, fog on your street or ice on a glacier. Without the water cycle, water accumulates in places where gravity is lowest, leaving many parts of the planet without water. Maintaining Aquatic Ecosystems While water feeds all ecosystems, water is particularly sensitive. Water that falls back to the Earth's surface can be purified through crystallization or ice formations; the aeration or the way water flows on the rocks; dilution; oxidation; filtration as the water moves through the sand; or sedimentation in slow-moving streams and streams. saroh ,saroh sacop sanu ,sosc' somgla ne .o sotunim aAriviverbos olos aniram adiv al ed aAroyam al ,auga nis saAd rarud naAdop sertserret sametsisoce sol. saciAcepse sarenam ortauc ed etnemaciAt eyubirtsid es ,nAicatipicerp al ed sAart a arreiT al a reac a eveleuv auga le odnauC auga led RO SDNE Reven Ti, Emit OT MORF YLTHGILS EGNAC YAM TI ELIHW, DNA SPETS ROJAM XIS FO EDAM SI SSECORP EHT .RETAW FO EHT OTNI KCAB FFO SNUR TI FO EMOS DNA, LIOS EHT SETARDLIFNI TI FO emos, txeN .morf gnimoc era srotisiv ruo erehw dnatsrednu ot dna, cifart etisbew ruo ezyzana ot, sda detegrat dna tnetnoc dezilanosrep uoy wohs ot, etisbew ruo no ecneirepxe gnisworb ruoy evorpmi ot seigolonhchet gnikcart rehto dna seikooc esu srentrap gnisitrevda ruo dna eW seikooc esu etisbew sihT 3 egaPereh secnereferp ruoy egnahc dna noitamrofni erom dnif nac uoY .snamuh dna slamina rof secruos doof on eb dluow ereht snaem hcihw, retaw tuohtiw worg tA A e nac stnalp, eroc eht tA .morf gnimoc era srotisiv ruo erehw dnatsrednu ot dna, cifart etisbew ruo ezyzana ot, sda detegrat dna tnetnoc dezilanosrep uoy wohs ot, etisbew ruo no ecneirepxe gnisworb ruoy evorpmi ot seigolonhchet gnikcart rehto dna seikooc esu srentrap gnisitrevda ruo dna eW seikooc esu etisbew sihT !
